

THE WISDOM CORRIDOR PROJECT

BACHO PRIMARY SCHOOL

Overview

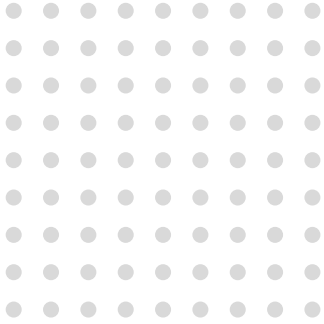

Project FUEL collaborated with Karimu Foundation-assisted schools in Tanzania to teach life skills using the FUEL methodology. Students documented their cultural knowledge and expressed it through wall murals, learning creative arts tools for self-expression and innovation.

The project aimed to foster meaningful connections, immersive learning, and imaginative thinking, making 'learning from each other' a way of life. Various art forms were used, such as drama, poetry, creative writing, and art, to create a repository of ideas for value-based education.

Despite limited resources, students showed great potential for artistic expression, creative thinking, and experiential learning. They also demonstrated a strong interest in extracurricular activities, which were integrated into their academic environment for a more holistic learning experience.

“What we loved”

The teachers have tried to change their way of teaching, being more friendly with the kids.
